

Microwave PCB

OUR COMPANY

Baselectron manufactures and supplies **printed circuits** for a wide variety of applications, supporting customers from the very first prototypes to serial productions. The company was founded in 1977 and boasts over **40 years of activity** in an industry where experience is one of the key elements to provide customers with precise, quick responses and support from **specific skills**.

THE MISSION

Baselectron's mission is the development, industrialization, quick prototyping and preseries of **printed circuits**.

COMPETENCE IN POWER PCB MATERIALS

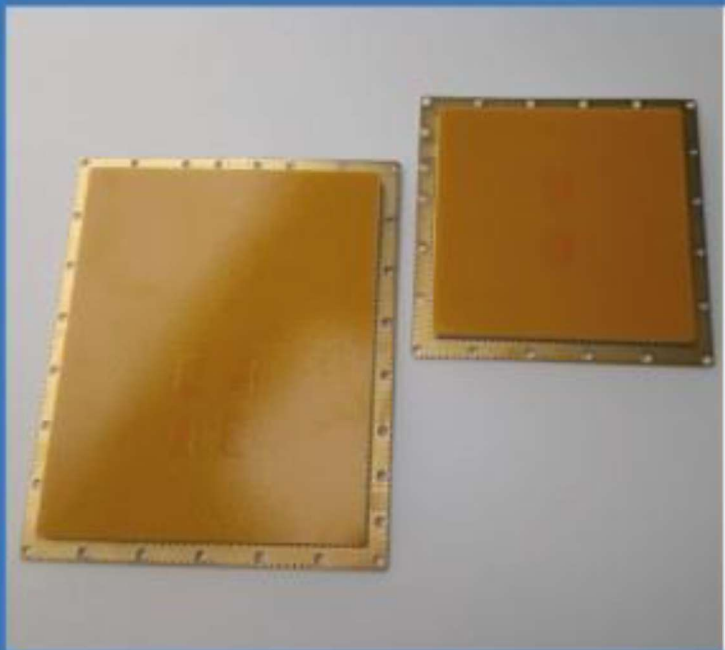

OUR TECHNICAL TEAM

Baselectron's technical team can support you in development of **standard** and **special** products, from the drafting of the project to finished product.

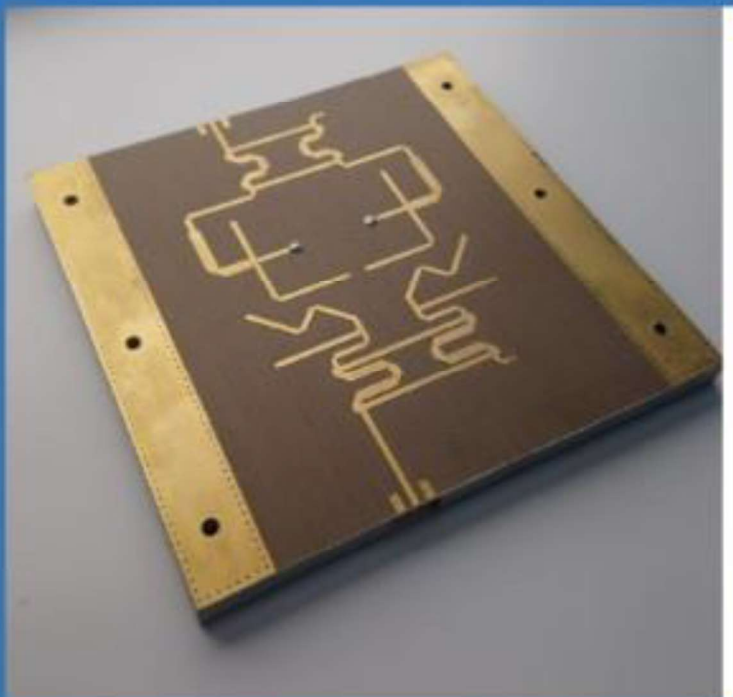

VERY HI-THICKNESS MICROWAVE PCB

We can support you to drawing **microwave antenna** systems using a very low *DK* and *DF* materials, composed by a rigid foam.

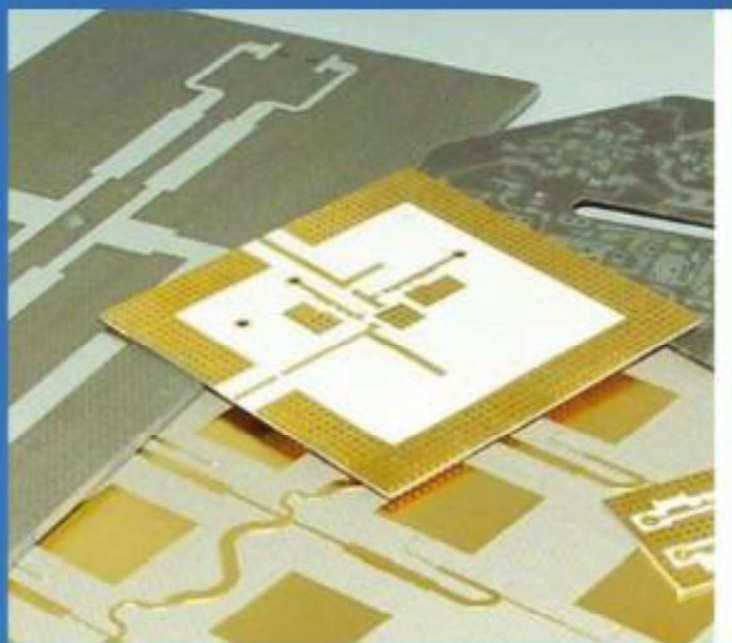

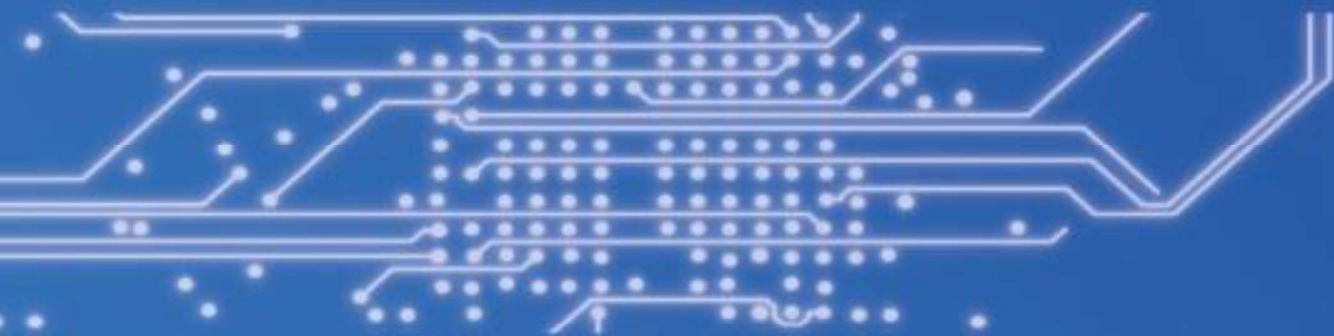

PATCH ANTENNAS

This kind of antennas for **radar applications** have a build-up composed of multiple layers of *Rogers* material, alternating with rigid foam.

HYBRID MULTILAYERS

With our technology, we can produce multilayer PCB for **radio frequency** applications using the most varied mix of laminates.

RF MATERIALS

We can produce **microwave PCB** using all kind of *RF* materials: *Rogers, Taconic, Isola, Arlon, Dupont*. Normally stocked in our warehouse.

SERIES PRODUCTIONS

Of course, we can provide not only prototypes but also **large** productions.

UNCONVENTIONAL PCB
